

LightGear™

BY
renaissance photo tech

The best photo backpack is the one that fits. One-size-fits-all is wishful thinking. Unless your pack distributes its load effectively and comfortably to your waist, hips and shoulders, it is working against you - *adding* to fatigue. Top backpacking photographers insist on backpacks designed for serious trekking. Comfort and fit along with lightness and effective design are key. Then they convert it for photo use. This conversion has been an expensive and time consuming task - until now.

Introducing LightGear™ from Renaissance Photo Tech. This patented* new system, made of molded foam and pack cloth laminate, allows you to turn your backpack into a photographic tool. You will appreciate the lightness, quality construction and excellent protection offered by the LightGear™ system. It is simple, flexible and affordable!

Fatigue kills creativity. Guard your equipment **and** your creativity with LightGear!

*Patent Pending

 <p>1</p> <p>Three components: Camera case, lens case and backboard</p>	 <p>2</p> <p>Insert and attach backboard in your backpack (Kelty Redwing 3100 shown)</p>	 <p>3</p> <p>Attach double-sided hook fasteners to the case's loop sections.</p>	 <p>4</p> <p>Assemble lens cases into cluster</p>
